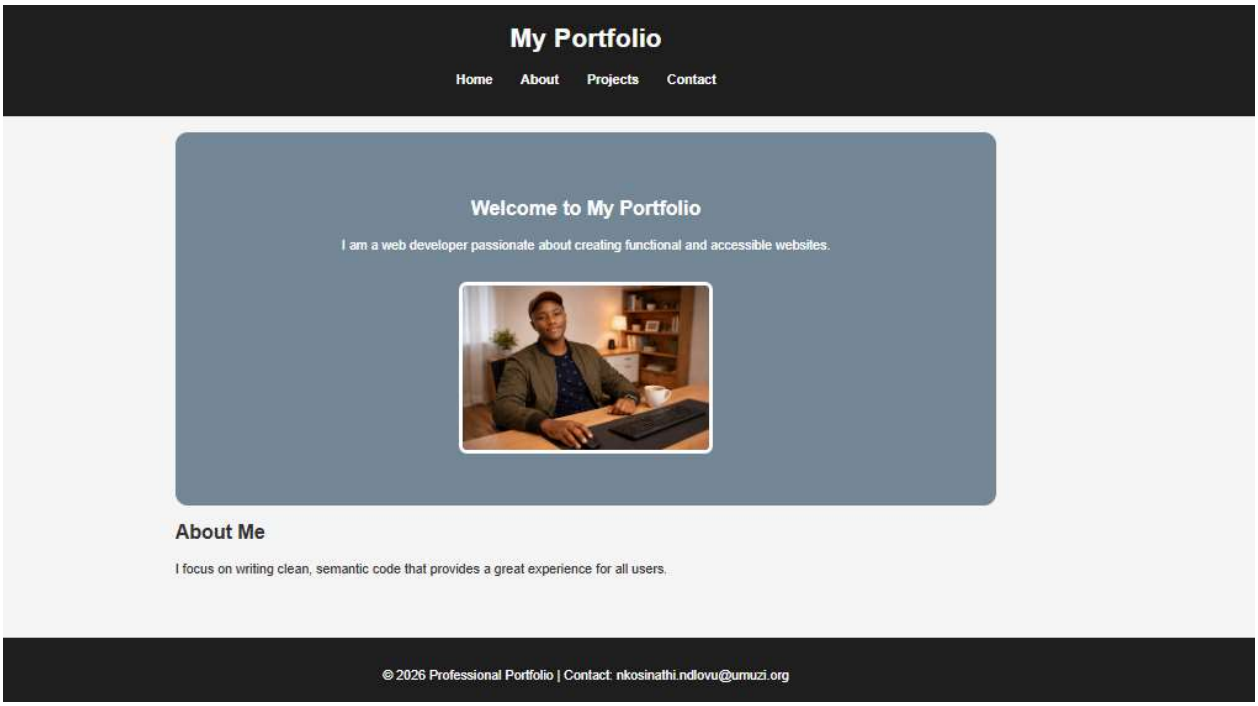
THE CAPSTONE PROJECT SITE MAP

The index.html(homepage)file.

In the screenshot below, there is a visual look of how this home page will look like. The header which will be visible in the same way to all the four pages. And in the header there are links that will take the user to each webpage. Then after there is a section which gives a brief description of myself as a leaner developer which also includes my profile picture.

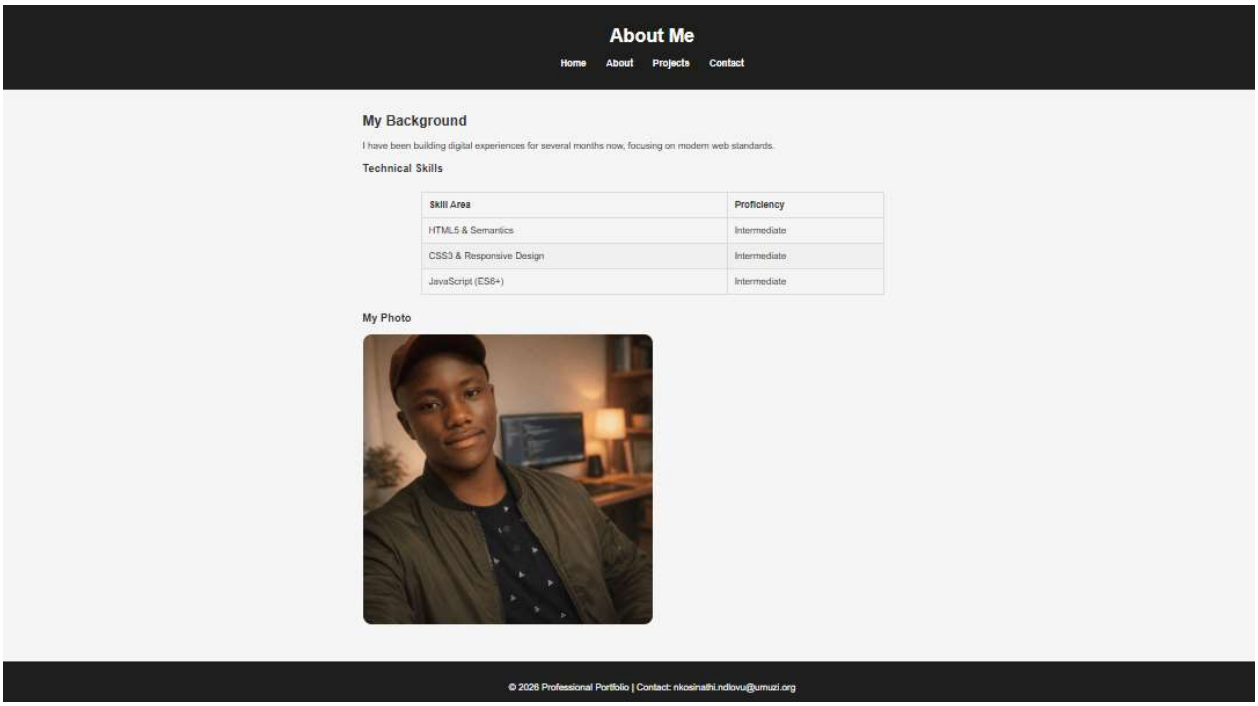
The image below represents a screenshot of my index.html(Home page):



The About page(about.html)

The About page displays if the About link is clicked in the header the webpage the header section remains unchanged. The About page will describe my skills in words and the level of skill that I have in a table. And it also shows a picture of me from a different angle and posture. The footer also remains unchanged

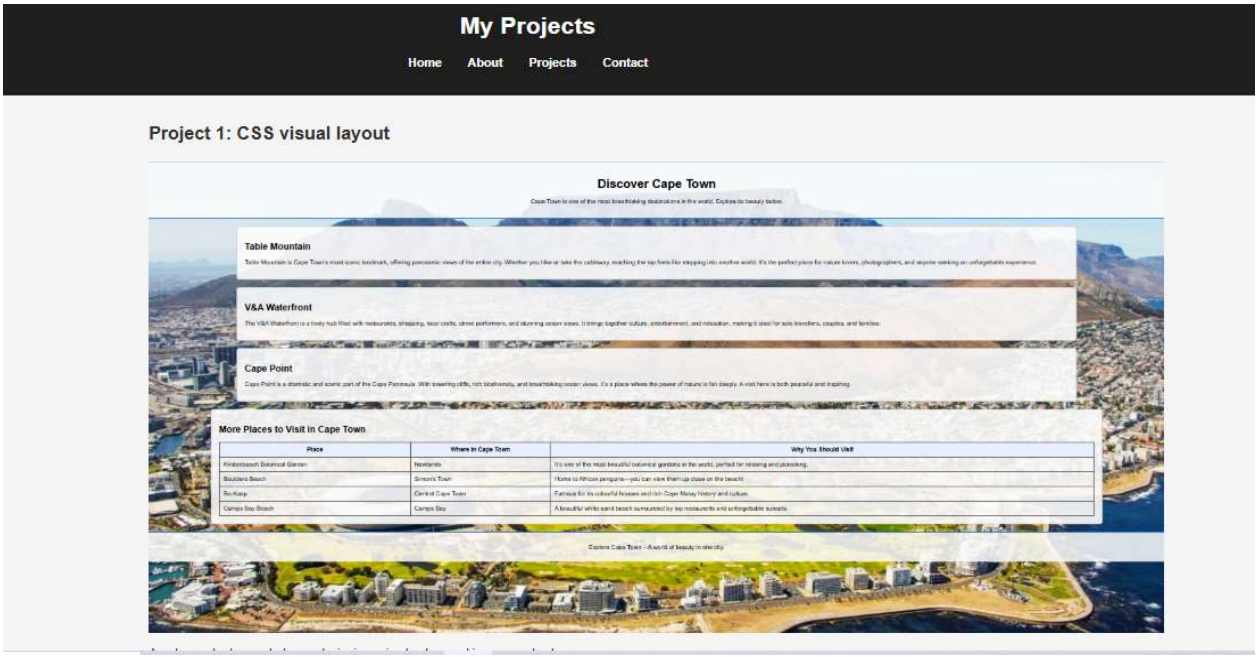
The image below represents a screenshot of the About page:

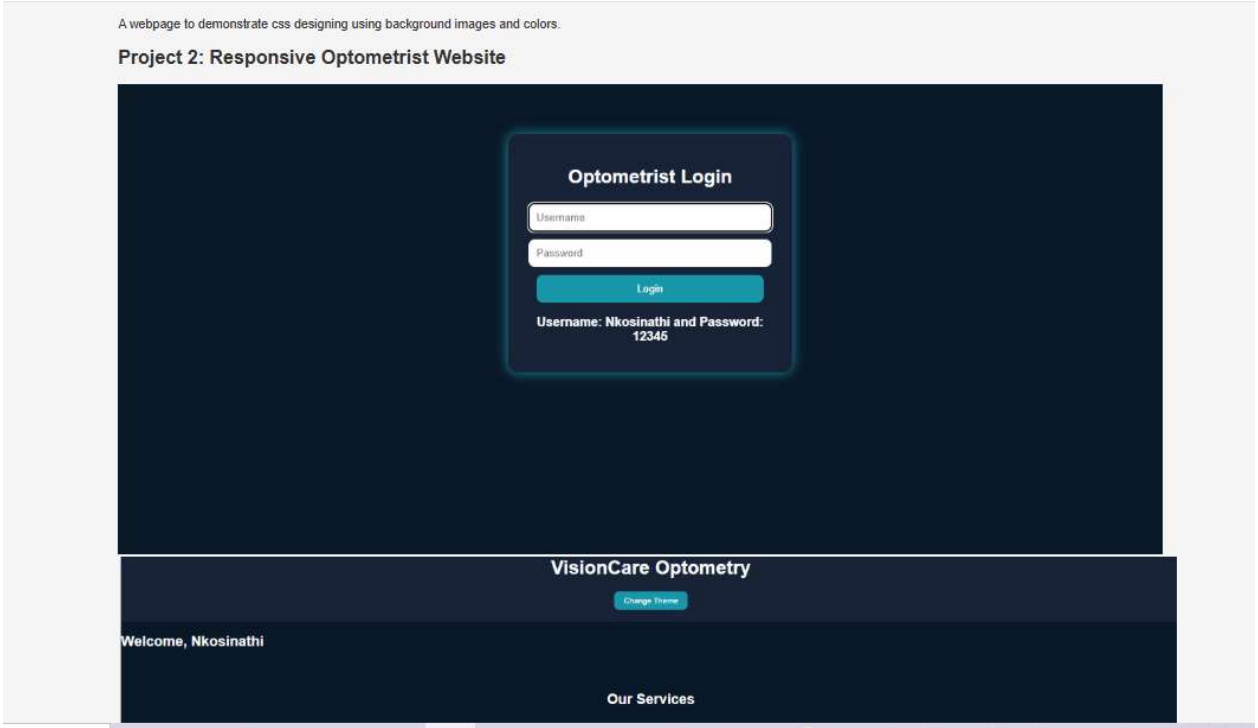


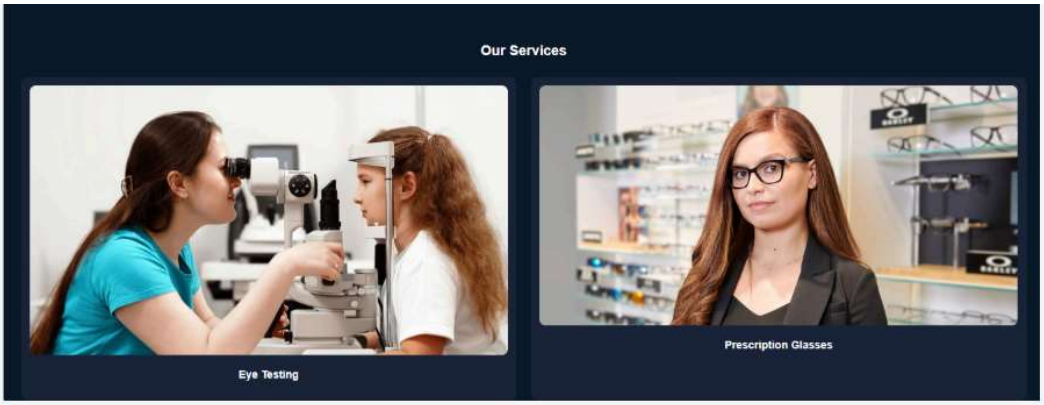
The Projects page(projects.html)

The Projects page is displayed after the Projects link is clicked in the header of the webpage which sends the user from any of these pages to the Projects page. The header and footer remain unchanged. This page displays 3 projects that I have completed with my html, css and javascript skills. The screenshots of these projects are displayed on this page

The four images below represent screenshots of the Projects page:



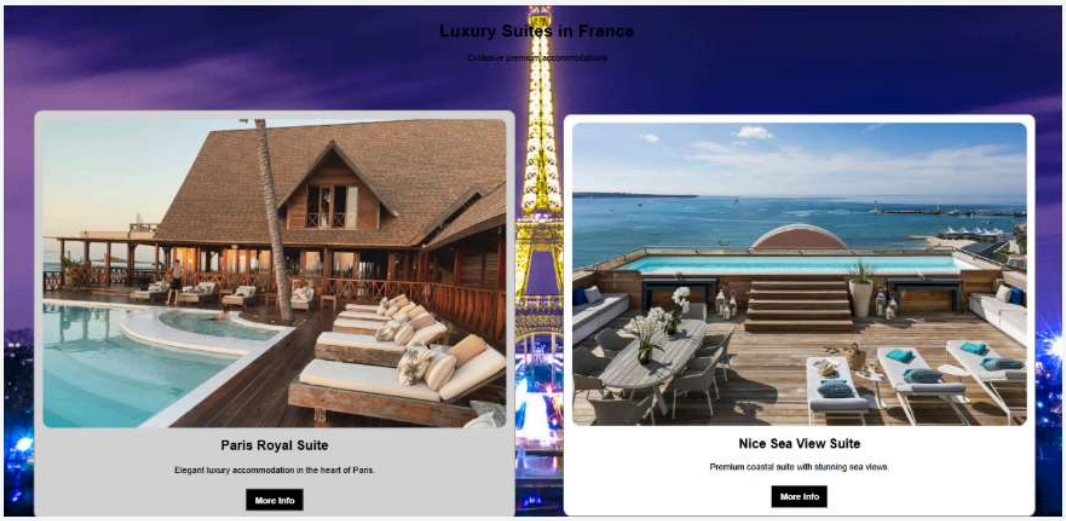




An optometristrist responsive webpage with login and home page with clickable components.

Project 3: Interactive Dashboard

Project 3: Interactive Dashboard

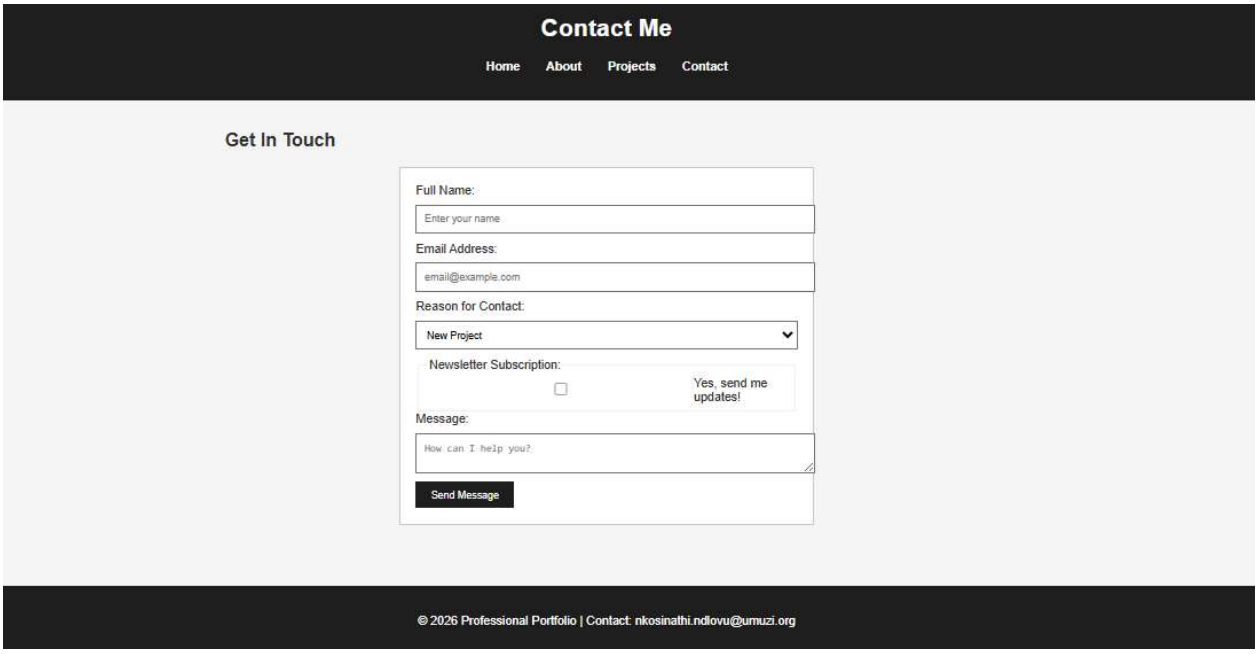


A webpage that advertises french premium accommodations, and the webpage is interactive and has css hover and other effects.

The Contact Me(contact.html) page

The contact me page appears after the Contact link is clicked and the Header and Footer remain unchanged. This page displayed a platform where a user who wants to send a message to me or wants to communicate with me can interact with.

The images below represent screenshot of the Contact me page:



Conclusion

The above screenshots depict the whole display and functionality of my app.
